```

Meta Author Tag

Search engines often index the META Author Tag found in the <head></head> section of web pages.

```
<meta content="Marc Phillips" name="author"/>
```

SearchForecast suggest that the names of the management are rotated in the Author Tags on various pages – as many people search by individual names when using search engines. For example:

```
<meta name="author" content="Bill Gates, Steve Jobs" />
```

Meta Language Tag

Search engines often index the META Language Tag found in the <head></head> section of web pages. Many client website do not have any Language Tags which is limiting the search engine indexation of the website pages. Language Tags are often used in foreign language websites and provide greater visibility for websites to be indexed by foreign country search engine spiders and crawlers.

SearchForecast suggest that clients consider inserting the Language Tag – to reach a broader geographical zone of prospective customers.
