

Outward Linking - The Importance of Accessibility

Search Engine algorithms also strongly consider the accessibility of a website by counting the number, quality and relevance of outward links – hyper text links contained within the client website to external websites. Search Engines consider a website desirable for higher search engine indexation where it contains websites that link to related websites.

SearchForecast suggest that clients increase the number of links to the following types of organizations within each of their website pages.

Outward links should be selected from:

1. Related Government departments (.gov)
2. Related Industry Associations and Business networks (.net)
3. Related Trade Organizations (.org)
4. Related Information websites and directories (.info)
5. Independent Commercial organizations such as news, media and magazines websites (.com)

It is the process of the clients placing outward links to other relevant websites that will result in increased natural optimization. The below is an example of how a SearchForecast client has increased the number of outward links to external organizations for Figtree Systems

Figtree Systems

Fleet Management - Immediate savings of time & labour gathering data to protect most valuable volatile assets.

The Applied Semantics Algorithm

Search engines will award higher importance to links pointing to and from the client website that have similar or related content. An important element of search engines algorithms is "Applied Semantics" – that determines the industry relevance of a page within a website.

Applied Semantics algorithm studies various keywords on a web page and tries to determine the industry or business segment of each page. Applied Semantics estimates the industry segments that are relevant to a particular page. Put simply, if the link to or from the client page is coming from or going to a relevant segment, then client are likely to improve their PageRank.

As an example, as detailed in the below listed Outward Link Analysis, the top ranked websites has only 149 outward links.

Top 20 Outward Links Analysis > Global > Ringtones > April, 2006

Important Note: PageRank Does Not Equal Backward Links

It is important for client management to note that a high Google PageRank does not necessarily mean a higher natural search engine indexation over competitors. Where similar websites have the same Google PageRank, not only is the number of backward links important but the *quality* of those links is.
